

ECHO SHAPES 9.0

SPILIGHTING
www.spilighting.com

Whether you want to deliver low-glare indirect illumination to a work surface, accentuate the verticality of the space, or directly light the exterior of a building, Echo Shapes 9.0 is the solution.

This powerful luminaire offers field adjustability and, unlike similar products, repositionable light engines that leave the fixture static. This ensures its appearance is always uniform, even when distributions are different for performance or obstructions.

Product shown with optional cutoff shields

Features & Benefits

- Increase visual comfort, reduce glare, and improve light uniformity with indirect lighting
- Deliver high-power indirect illumination within a subtle architectural form
- Field adjustable distribution ratchets to five positions (-35°, -17.5°, 0°, 17.5°, and 35°) while maintaining a static housing
- Wet listed for exterior applications
- Choose from visually-matching indirect and direct luminaires
- Up to 130 lm/W delivered
